

## Features/Functionality

1. As a user, I want to find places to eat quickly, so that I can have more time in the day. - Have a filtering system that shows good places to eat near them and show suggested places based on their searches.
2. As a user, I want to know when my food will arrive, so that I can be ready and be home. - Have a progression bar that the customer can access to see when the food will arrive.
3. As a Restaurant Manager, I want to be recommended to customers, so that I can have more business and make more money. - Have a review system where the customer ordering the food can rate the food that they received and with the higher review the more they will be recommended to customers on the app.
4. As a Restaurant Manager, I want customers to have easy access to my menu, so that they can decide what they want quickly and easily. - Have the restaurant when they make an account upload their menu then if they ever update it they can update the menu in the app as well.
5. As a user, I want to get good quality food, so that I don't get bored of eating out all the time. - Have a review system so that they can see if it is good quality of food. Then they can leave a review after eating their food.
6. As a user, I want ingredients, so that I can know what I am eating. - Have an ingredients tab so that customers can see if it has something they are allergic to or If they don't want to eat something that is in the meal.
